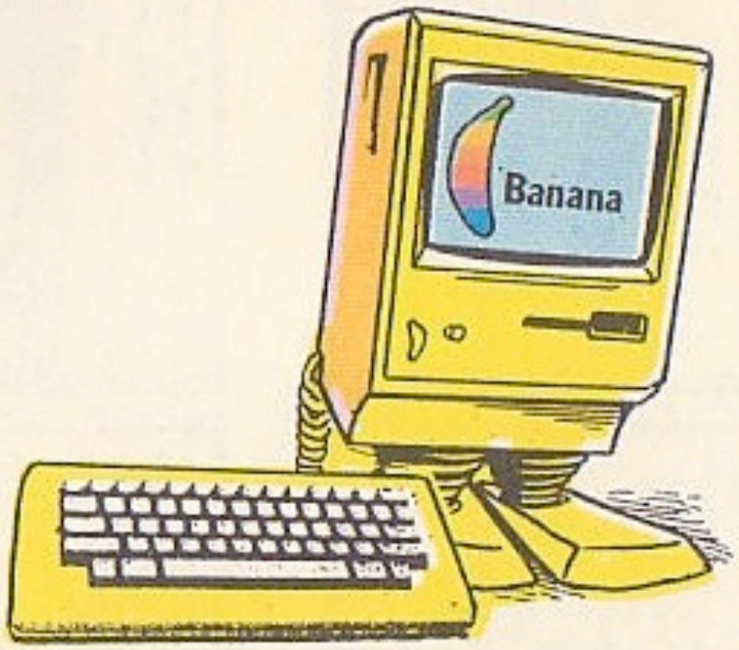
GENE SIMMONS NEVER HAD A PERSONAL COMPUTER WHEN HE WAS A KID

How do we know? We know because our own well-documented research has shown conclusively that a child who lacks his own personal computer during those earliest school years will very probably grow up to be a bass player in a heavy-metal rock band who wears women's fishnet pantyhose and sticks his tongue down to his kneecaps. Just like Gene Simmons.

Your child's future doesn't have to look like this.

The Banana Junior 6000 Self-portable Personal Computer System, complete with its optional software– Bananawrite, Bananadraw, Bananafile and Bananamanager–is just what your four-year-old needs to compete in today's cut-throat world of high tech and high expectations.



The Banana Junior 6000...
Buy one before it's too late.
Gene's mother wishes she had.

Learn the Basics

Build digital literacy skills by selecting from the categories below.

Using a Computer or Mobile Device

Learn how to use the mouse, keyboard, icons, and folders

Using Software and Applications

Use software applications: word processing, creating spreadsheets, tables and databases

Using the Internet

Search the Internet, use email, register on a website

Communicating on the Web

Share photos and videos, communicate using social networks, learn to be an informed digital citizen

Child Online Protection

Help children learn to be responsible and make informed decisions online

Need in-person help? Find your local library!

There are more than 16,600 public library locations around the United States – and nearly all of them offer no-fee public access to computers and the Internet, as well as trained staff to help you gain skills and connect you to online and print resources.

Not sure where your closest public library is?

Visit the Institute of Museum and Library Services website and enter your city or zip code to find your library.

Basic Computer Skills Curriculum

On this site you will find lesson modules covering basic computer skills developed by computer teachers* from Adult Basic Education programs in the St. Paul Community Literacy Consortium.

You will find Lessons (handouts), Teacher Guides, Vocabulary Lists and Activities. Some computer skills may have several lessons associated with them and some lessons may cover several computer skills.

The lessons are grouped by computer task and skill. Rather than rigidly defining a day-by-day curriculum, teachers can pick and choose lessons and activities that suit their classroom needs and student's pace.

The teachers on this project highly recommend incorporating keyboarding practice into your curriculum. Using a keyboarding program such as Mavis Beacon every day will help your students feel comfortable on the keyboard.

Credits

* This project was funded by America Connects Consortium with the goal of creating lessons for common basic computer skills that teachers in the Adult Basic Education field could download and incorporate into their classroom at no cost.

Curriculum developed by:

- Jessica Schachterle from Minnesota Literacy Council
- Daniel Hoisington from Lao Family Community
- Deb Woodburn, volunteer with Chicanos Latinos Unidos En Servicio working with Minnesota Literacy Council

Thanks to the Minnesota Literacy Council and teacher, Jessica Grace Jones, for the new additions. For feedback or questions regarding the curriculum, contact Jessica at jjones@themlc.org.
