my background

Open Library
I helped people borrow free ebooks via the Internet Archive for three years

RTCC
I do a Drop-In Time for digitally divided folks in Central Vermont

UH/VTC
I teach college, graduate school, write for Computers in Libraries magazine and do public speaking like this.

I work mainly in or with public libraries but I think these ideas have wider applicability.
Let's start here. This is a true fact. And what's weird is I've been doing variants on this talk for a decade and the number which was a little over 20% used to move and it doesn't anymore. Those 15% are staying put. In Canada this number is nearly the same, estimates are in the 13-15% range, despite actually more people being CAPABLE of getting broadband. So my question is …
Really?

Don't they want to see their grandchildren, get cheap printer ink, send people endless selfies, and apply for health care?

No? No.

The question many people ask is this one. And from my perspective, I am curious. Computers, and the internet is FUN for me.
This is Marian and she is one of the many people who comes to my computer drop-in time, a thing I have been doing weekly for a decade where I live in rural Vermont answering any and all computer questions. Marian wants a Scrabble game for the iPad but only one that used the 5th Edition dictionary. Good luck Marian. In addition to drop-in time, I also teach college classes (HTML and CSS in a classroom with a chalkboard and an LCD projector and no computers, some kids have them, most don’t) and so I feel like my finger is on the pulse of the digitally divided.
When someone tells me the digital divide is over.

People like to be all "Oh hey aren't libraries so last century?" and I'm all "No, no way, not really at all, nope." But the problem has shifted as have the challenges that come along with those shifts. I'll outline five key points here.
1

Understand the issue.

The history of "offline" people and places.
People talk about rural electrification when they talk about broadband adoption. This is New York's hydroelectric generator at Niagara Falls in 1895 (Westinghouse). The first large scale power station was in NY in 1882!! Here is us getting broadband in **2012** It's harder to give people internet where there are mountains and rivers and winter. You know who has some of the best broadband penetration? Oklahoma. Flattish. Oh I’m sorry that money is in Singapore dollars it’s really (click) this. I pay about that to get broadband that isn’t even considered broadband anymore.

But here's the thing about electricity. It was (mostly) centralized and it was MARKETED. These photos were taken by Edison as part of a huge marketing strategy to get everyone wanting to buy lightbulbs. He hired artists that you've heard of to sell this stuff. Maxfield Parrish. And of course my favorite option the, uh, face vibrator.
But here's the thing about electricity. It was (mostly) centralized and it was MARKETED. These photos were taken by Edison as part of a huge marketing strategy to get everyone wanting to buy lightbulbs. He hired artists that you've heard of to sell this stuff. Maxfield Parrish. And of course my favorite option the, uh, face vibrator.
And the thing they stressed was that this was for everyone. Farmers. Homemakers. Businesses. You. They did these big POWER CIRCUSES up here, come see the stuff! Come thing about a future where you might buy the stuff.
And the thing they stressed was that this was for everyone. Farmers. Homemakers. Businesses. You. They did these big POWER CIRCUSES up here, come see the stuff! Come thing about a future where you might buy the stuff.
Assuming you were cool. And it was cool, they said. Come on, this is the good life. But then once they connected MOST people, businesses we're like "We're good" and left the government to get the last people. The last people in VT to get on the electric grid were in Victory Vermont in **1962** It's not really worth it to get those last mile people. Let them cook over a fire. COME ON.
Even if we give the farmer free current for an entire year, it is but little inducement to him in the installation of this costly equipment

Things are not so dissimilar out in this area. It was a constant hassle to get people to see electricity as a genuine option.
Women understood how much wood was needed to make bread, or heat water…. Few understood where electricity came from, how it was generated, or knew for sure how to tame its potentially dangerous rays.
Rural electrification was completed here in the early 1950s. In Ontario those dates are about the same. Not as much in the other provinces… 87% of rural Alberta had access to electricity by 1961. So part of the answer to “Why are people still offline?” is “They got a late start” We'll look at some other reasons….
We're not great salespeople.

Computers can be a pain! But society needs to do better at helping the offline people get **happily** online.

So part of what we are doing now in the library world is not just helping people, but working on their attitude, and ours. Getting a grip on this stuff is no longer optional and we shouldn't act like it is.
My feeling about the digital divide is like this…. it’s fine if you don’t want to use a computer. But it’s like not driving a car. The person who can’t drive understands the realities of using public transportation or asking other people for rides. They understand the costs. This is not the same for people not using computers. The costs of remaining offline are hidden, or at least they are right up until your town floods and the only way to interact with FEMA is through a web page. Awkward.
The best we seem to be able to do in the US is say "Um if you do your taxes online, you can save the government $2!" which should be good because hey that saves America money! In the US we can't compete with the government so only people with low incomes can file online for free. You guys have ... NETFILE? Which seems to be a better incentive than "Fill out all these forms and we'll tell you if you owe is money."

Which seems to be a better incentive than *Fill out all these forms and we'll tell you if you owe is money.*
Who is left offline?

These are slightly old numbers. The rarios remain roughly the same even as the bars get taller. When we look at the numbers—the numbers barely anyone is counting because they don’t like the story they tell—we realize that the people who are getting left behind are the people with all the other challenges - economic, education, mental, physical. And if we know this, isn’t it our responsibility to make sure they can live the goofy old good life too? The hardest to serve have always been the hardest to serve, and they are society’s responsibility.
And we used to think the problem was old people. You know, old people like me and you. But the research shows that is not the case. I mean it sort of is, but … So we need another plan.
Really we are seeing three separate issues. The first one we've done a good job on. Yay us. The second one we're working on. Better websites. UX all the way. The third one is the challenge because **inclusion is difficult in general** and because some of us don't feel included already. It's hard to try to work on inclusion when you are feeling excluded yourself.
Are people PRIMED TO LEARN? With lots of learning opportunities shifting to online spaces, people need digital readiness to take advantage of other opportunities. We should understand this issue. This has gotten a lot of attention lately because it gets lumped into the “fake news” or “alternative facts” category. We’ve just learned that no, actually, a lot of people can’t tell the difference, and this affects digital literacy, civics, the whole thing.
Offline people? They can't get online alone. As the digital divide has been shrinking this piece of the pie gets bigger. They need help, they need our help.
library usage as indicator

Library users and the highly wired are more likely to use the internet in personal learning

% of personal learners who use the internet for learning among ...

- All personal learners: 52%
- Those with home broadband and smartphones: 60%
- Those who have used libraries in the past year: 55%
- Hispanics: 46%
- Blacks: 45%
- Those with household incomes of $30K/year or less: 44%
- Those with high school degrees or less: 43%

Turns out people who use the library are already more likely to be digitally ready. Cause/effect thing.

TECH AND DEMOGRAPHIC INDICATORS:

Those with home broadband and smartphones 60%

Those who have used libraries in the past year 55%

Hispanics 46%

Blacks 45%

Those with household incomes of $30K/year or less 44%

Those with high school degrees or less 43%

Turns out people who use the library are already more likely to be digitally ready. Cause/effect thing.
No supplemental funding is allocated to provide training, technology, and the necessary resources to provide a government service... adding up to an unfunded mandate for libraries.

- Nancy Kranich, ALA President (2008)

I sometimes refer to this as the "unfunded mandate" of these technology economies of scale which are supposedly saving us money with "egovernment" Part of the way they do this is shift costs from government to libraries. Nancy is here this week, she’s worth listening to.
The only thing we have to fear is...fear itself — nameless, unreasoning, unjustified terror ... I am convinced that you will again give that support to leadership in these critical days.

- FDR

So back to the users.... a lot, most of these people need help because of the TRUST aspect of the thing. They are afraid, trepidatious, anxious. And so we’re going to look at working on their anxiety issues as a way of solving the real problem. Here are some things that I do.
Uniting against a common enemy.

The only negative talk allowed: against the institutions which make this difficult for us.

I know it can sound a little woo but I find that “positive self talk” is actually one of my most useful digital divide strategies. People need to get more trusting. Trust is hard to build. Offering positive options and the only thing you’re allowed to say negative things about is the technology.
"Why you need a bazillion character password."

People have a lot of things that they are upset about, I try to explain without overexplaining, why some things are like this.
Yahoo blames “state sponsored” data hackers
A little bit of this, I will admit, is in what I call the Blame the Big City category. I mean in the US we have the MPAA and RIAA and APA to thank for DRM and all those threats you have to sit through before you watch a DVD. Hollywood! There’s a subtlety in being able to tell someone that a thing is technically possible but practically speaking illegal.
I taught an iPad class in the spring and one day we had class and I told everyone "Hey we're going to learn about software updates because you all have updates to do..." They looked at me like I was a magician but sure enough they did. Why? Because the Apple Watch had just come out. Explaining the Apple Watch to my neighbors is a bit like trying to explain Uber.... But in short it's Blame the Big City
And a lot of it, more than you would think, is about how you say what you say.
Social media is becoming a larger part of where people get their “news.” This is from a while ago but I think it’s still useful. There was a Pew report. PBS ran a story. Look at the way PBS CHOSE to spin this. Really PBS? I thought we were friends…
I don’t want to be all “turn that frown upside down” but just finding better ways to talk about tech that aren’t all as if you were in a bad relationship with it can go a long way. Computer don’t have issues, they don’t hate you, they are big calculators that are only as good as the flawed humans who made them.
Attitude upgrades.

Put another way: You don't tell your patrons when you are fighting with your partner, why do you tell them when you are fighting with your computer? I can't think of a single time I have called an online support person (for anything, magazine subscriptions, health care, newspaper subscription) where some of our phone call did not involve blaming the computer.
public/private stances are OK

It’s also important to have a narrative for your patrons and one, maybe a different one, for your professional peeps. Atlantic, did you just say that? We all had a good laugh here. I don’t bother trying to explain this sort of weird stuff to patrons.
So I work on my language, and how I phrase things. A few examples. And this is not just with patrons this is with the public, with the media (who I speak to as often as possible, we seem to have a problem with promotion of our institutions and our values and suspicion of those who do this)
Yeah I know Twitter seems stupid when you read about it in the paper, but here's what I like about it…

-A me

Acknowledge their feelings. Share your own experiences. Illustrate using accessible examples. And current examples.
Acknowledge their feelings. Share your own experiences. Illustrate using accessible examples. And current examples.
Because really, the internet for me is a lot of good things. It’s people to talk to when my town is asleep. It’s places to get free photos for my talks. It’s a way to keep up with my professional development. It’s where I can look for a book in a thousand libraries. Or where I go to work.
And the library scene on the internet is sort of amazing. I loved just looking at every single amazing and earnest set of costumed librarians during halloween. I could have done it all day and then some. It’s a nice place that we’ve helped to build and I’d really like it if it could be available for everyone.

YOU are the resource.
Or someone needs to be. These are human problems, not technological ones, and need human solutions.
And one of the thing the research points us to about digital readinesas and uptake (and this is true for climbing out of a number of social problems generally, people just out of prison, domestic violence victims, trauma survivors generally) is that the more supportive their ENTIRE NETWORK, the better off their ability to get out of their bad situations. Now lack of broadband/connectivity is not necessarily a bad situation like these others, but it does impose structural limitations on connectivity, inclusion and access that we should be working against.
Back to Marian

Just to let you know—Gayla feels more positive about the "Computer World" after her meeting with you yesterday. I met her coming into the school and she said she just wanted to throw every computer-related thing into the trash. Good job, Marian.
Knowledge lives in communities, not individuals.

- Phil Agre

I include Phil Agre's How To Help Someone Use a Computer pamphlet/essay with every talk I give about the digital divide. Agre was a Communications/Info Studies professor and has a clear and incisive way of understanding large information problems. Sometimes I feel I should just tell people to read his essays instead of listening to me. One line from the essay I've linked stands out the most however. We not only give people access to the information they want (and need) but we also improve and strengthen their access to their communities. And that is what helps improve digital readiness and help people become more like … themselves.
Thank you!
